Document __

Title for this Knowledgebase article

Version: **2.x**, **3.x**, **4.x**, & **5.0** - **Scientific WorkPlace**, **Scientific Word**, & **Scientific Notebook**

Begin text here. Remember to enter the title in the Title box in Document Info.

Types of articles

There are generally two types of Knowledgebase articles: articles with a problem-explanation-solution structure and articles with a how-to structure. See the article Error: eps graphics typeset incorrectly for an example of a problem-explanation-solution article and see How to add multiple accents to a character for an example of a how-to article (use Ctrl+click to follow the hyperlinks).

Tags used in articles

Use the H2 section tag for the title of the article. Use the H3, H4, and, if necessary, the H5 section tags for section headings in the body of the article.

Use the gentext body tag for the body of an article.

Use the CodeSample body tag for text found inside LaTeX documents, as in this example:

```
\documentclass[12pt]{article}
```

Use the Sample body tag for displaying sample text, as in this example:

Replace this text with your own. You may delete all of the text in this document to start with a blank document.

Add the Bold text tag to the Sample body tag for error messages, cautions, and warnings, as in this example:

Your trial or fixed duration license file has expired. **Contact**

MacKichan Software to purchase a permanent license.

The Docnum and Version body tags are used as shown at the beginning of this document, and the Revision body tag is used as shown at the end of this document.

Use the BookName text tag for journal or book titles: *Typesetting Documents in Scientific WorkPlace and Scientific Word*

Use the Code tag to show existing information in a file: `\documentclass[12pt]{article}`

Use the MenuDialog text tag for menu items, as in this example: Select from the **Insert** menu and choose **Hypertext Link**.

Use the UserInput text tag for entries that are to be typed by the user: Type `http://www.mackichan.com` to enter the hypertext target.

Style-specific function key assignments

The style assigns function keys to the following tags:

- F3 = Gentext
- F6 = MenuDialog
- F9 = Code
- F11 = H1
- F12 = H2
